PROFESSIONAL SUMMARY

BCA graduate with 13+ months of experience monitoring 200+ IoT and network devices for a banking client, turning incident and performance data into daily and weekly reports for 15+ branches. Hands-on with Python, SQL and data visualisation through analytics projects, and an active intraday trader in Indian equity markets who builds and tests trading strategies on TradingView. Keen to apply data, analytics and AI to financial products with a customer-first mindset.

EDUCATION

Bachelor of Computer Applications (BCA) — Reva University, 2021–2024 | CGPA: 8.17/10

Intermediate (12th) — Sri Chaitanya Junior College, 2018–2020 | **10th** — Sri Chaitanya High School, 2017 | GPA: 8.8/10

TECHNICAL SKILLS

Data & Analytics: Python (data analysis & automation), SQL, data visualisation, statistical analysis, reporting & documentation, root cause analysis

Data Visualisation: Python charts and statistical plots, TradingView charting, branch incident and performance reporting

Financial Markets: Indian equity intraday trading, TradingView, Pine Script strategy development and backtesting, Q-learning for price-trend signals

Programming & Web: Python, SQL, Flask, HTML, CSS, JavaScript, GitHub, Android Studio, Prompt Engineering

Operations & Support: IoT device management, incident monitoring, network troubleshooting, ticketing systems, remote device configuration, virtualization (VMware), Windows 10/11, Kali Linux

Security: Cybersecurity fundamentals, MFA, password security, ATM & UPI security monitoring | **Soft Skills:** Communication, collaboration, problem solving, analytical thinking, leadership, customer service

EXPERIENCE

Artificial Intelligence with Python Intern | Languify | December 11, 2024 – May 25, 2025

- Completed internship training focused on Artificial Intelligence and Python.
- Worked on data analysis related to student learning, including age groups and selected learning courses.
- Used Python-based analysis to explore learning/course preferences and interpret dataset patterns.

Technical Support Engineer (NOC) | 6th Energy | Bengaluru | July 2025 – August 2026

- Monitored 200+ IoT and network devices across ICICI Bank infrastructure, supporting 24/7 uptime and SLA compliance.
- Produced daily and weekly incident and performance reports for 15+ branch locations, enabling proactive issue tracking and root cause analysis.
- Diagnosed hardware, software and connectivity faults remotely and coordinated with Level 3 engineering to resolve complex cases.
- Maintained detailed logs of incidents, resolutions and device configurations in ticketing and reporting systems.
- Recognised by management for proactively detecting ATM security vulnerabilities and ensuring zero-breach compliance across monitored sites.

ACHIEVEMENTS

- Identified a missing function in a popular UPI app through hands-on use, showing attention to detail and a customer-focused eye for product gaps.

PROJECTS

Intraday Reversal Strategy (Pine Script, TradingView)

- Designed a multi-pattern intraday reversal strategy for Indian equities, then audited it and fixed bugs to improve reliability.

Stock Price Prediction using Q-Learning

- Developing a reinforcement learning model to identify stock price trends and generate buy/sell signals from historical data.

ASD Prediction and Data Analysis

- Analysed 1,000+ patient records in Python, using visualisation and statistical techniques to identify key diagnostic patterns.

Android Internet Control Application

- Built an Android app to manage app-level internet access, with blocking and monitoring controls across 10+ app categories.

CASE STUDIES

- Train Ticket Price Optimization: Analysed real-time pricing, seat availability and discount windows to design a cost-effective booking strategy.
- Password Security Analysis: Researched MFA and zero-trust access methods that reduce unauthorised access risk.
